

MEDIUM DUTY CANTILEVER RACKING

Store your extrusions, pipes, steel or other long length products with ease and efficiency.

- Frees up valuable space
- Reduce stock damage
- Makes stock picking a breeze
- Available in single or double sided
- Slip pins available to prevent product rolling off

Long length products can be awkward to store and even harder to retrieve. Cantilever racking makes it easy for you to pick stock bundles without having to shift other products around. You save time and hassle and most importantly, free up valuable space in your warehouse or yard. You also experience a sharp reduction in product damage associated with double handling product.

The medium duty cantilever racking system is an excellent system. The system is very easily assembled and adjusted and it is available in single or double sided. We offer either a galvanised or powder coated finish depending on the environment in which the system will be set up.

Designed to be fully modular, you can start with a single starter bay and simply add on as required. A standard 4 post rack with 1500mm post spacings gives you a 4100mm long storage solution.
